

SwiftRide India – Enhancing Customer Support Analytics

Data-driven insights for efficiency, customer satisfaction, and brand protection

Our Support Ecosystem

Service Centers

Mumbai, Hyderabad, Pune

Three strategic sites with millions of rides in the major metropolitan areas in India.

Key Metrics

Tickets, CSAT, AHT, Cost, Reopens

Detailed analysis of customer satisfaction, operational performance and cost management.

Strategic Goals

Efficiency & satisfaction focused

Enhance response times, increase customer satisfaction, decrease the risk associated with operations and keep the contact rates per trip low.

Examining 6 weeks of data with 6 issue categories in order to determine high-impact improvement areas.

Current Performance Snapshot

136K Support Tickets

High volume focused on particular service areas

₹70M Operating Cost

Significant investment that needs to be maximized.

27% Reopen Rate

Issues with quality that result in recurring business.

Three to four business lines dominate our support demand, according to the data, which creates both opportunities and challenges for targeted improvements. Costs and ticket volumes are also not distributed evenly.

Support Demand Volatility

With a sharp 25% increase in Week 5 after a 16% decline in Week 4, support demand exhibits notable volatility. This emphasizes the necessity of more accurate forecasting and adaptable resource distribution.

Comprehensive Analytics Dashboard

A graphic summary of key performance metrics for more in-depth understanding of support operations.

Tickets by LOB

AHT vs. CSAT Analysis

Volume Distribution by Service Category

About 71,000 tickets, or 53% of the total volume, are in the top three categories. Our support load might be cut in half if we focus on making improvements in these areas.

Cost and Brand Risk Analysis

Rash Driving: ₹20.9M cost | HIGH BRAND RISK

Our most expensive support area is "rash driving" complaints, which present serious brand risks.

Efficiency vs Quality Matrix

High Effort, Low Satisfaction

Rash Driving: 8.2 min AHT, 72.5 CSAT

Cancellation Fees: 6.8 min AHT, 74.2 CSAT

High resource requirements and subpar customer results.

Efficient but Quality Issues

Invoice Issues: 4.1 min AHT, 86.3 CSAT

5,200 reopens indicate underlying resolution issues, despite the good CSAT.

Efficiency gaps are revealed by analysis: while efficient processes have quality problems that result in repeat business, high-effort categories produce low satisfaction.

Comprehensive Root Cause Analysis: Efficiency, Quality, and Cost Impact

This analysis visualizes the relationship between efficiency (AHT), quality (CSAT), cost, and reopen rates across Lines of Business (LOBs).

Worst Performer: Rash Driving

Low CSAT, high AHT; highest cost & worst reopen rate (40.20%). Critical area for intervention.

Quality Concern: Trip Invoice

Highest CSAT (85.50) but high reopen rate (33.13%). Indicates underlying resolution issues.

Best Performer: Vehicle Breakdown

Good CSAT (79.17), efficient AHT (29.33 min), low reopen rate (22.45%). Benchmark for other LOBs.

Worst LOBs by Cost

LOB	Avg CSAT	Reopen %	Avg AHT	Total Cost
My driver drove rashly	72.50	40.20%	41.00 min	₹2,08,94,115
Charged cancellation fee	75.67	22.42%	28.50 min	₹1,23,40,715
Accident on trip	76.33	20.98%	30.83 min	₹1,09,83,878
Didn't get trip invoice	85.50	33.13%	21.83 min	69,10,566

Costs and satisfaction are greatly impacted by high reopen rates. It is essential for improvement to focus on LOBs such as "My driver drove rashly" (40.20% reopen) and "Didn't get trip invoice" (33.13% reopen).

Quick Wins: 0-3 Month Implementation

Auto Cancellation Fee Refunds

Implement distance/time validation rules

Impact: -15K tickets, ₹2.8M savings

Multi-UPI Redirect for Invoice Payments

Seamless UPI App Selection

Impact: -8K tickets, ₹1.9M savings

Specialist Triage

Dedicated teams for accidents & breakdowns

Impact: +12% CSAT, -2.1 min AHT

Standard Reply Templates

Quick responses for top 20 queries

Impact: -35% AHT, +consistency

Reopen Reason Tracking

Mandatory categorization for analytics

Impact: Better root cause identification

Service Compliance Notifications

Real-time nudges for agents

Impact: +18% SLA compliance

Within the first quarter, these automation and process enhancements can save ₹7-8M in operating expenses while reducing roughly 50,000 tickets annually.

Strategic Investments: 3-12 Month Roadmap

1 **AI Ticket Routing & Classification**
Intelligent routing to specialized agents using machine learning based on past resolution trends and issue complexity

2 **Contact Rate Forecasting**
Demand planning is supported by predictive modeling, which makes it possible to allocate resources more effectively and implement cost-cutting measures.

3 **Fraud Detection Engine**
Advanced analytics to spot and stop patterns of misuse in false claims and cancellation fee disputes

4 **Smart Escalation Engine**
Real-time routing of high-risk or high-value clients to senior agents or priority queues is automated.

Our operations will be future-proofed against changing consumer expectations and market demands thanks to these strategic initiatives, which will also drastically reduce brand risks and AHT waste.

Expected Business Impact of Proposed Initiatives

₹15M+ Annually

Cost Savings (via automation, triage, and reopen reduction)

+3–5 points

CSAT Uplift (customer experience improvement from faster, accurate resolutions)

-25%

Reopens Cut (reduces repeat contacts and wasted effort)

Enhanced

Brand Risk Mitigation (proactive driver safety monitoring, fewer escalations, stronger trust)

Together, these enhancements boost productivity, improve customer satisfaction, and safeguard our reputation, setting us up for long-term success and operational excellence.
